 - Antibiotic therapy for *H. pylori* eradication ‡
- Stages* I-IV

 - R-CVP**: Cyclophosphamide, vincristine, prednisone, and rituximab
 - Rituximab
 - Follicular Large B-cell Lymphoma (Follicular Lymphoma Grade 3B)
 - R-CHOP(21)**: Cyclophosphamide, doxorubicin (Adriamycin), vincristine, prednisone, and rituximab

* Lugano Staging System for GI lymphomas

† Gastric MALT with translocation 11;18 (t11;18) (q21;q21) predicts a lower response rate to anti-*H. pylori* treatment. Radiation therapy or other local intervention may be indicated.

‡ Only generic antibiotics are considered pathway options for *H. pylori* eradication. Clarithromycin and either amoxicillin OR metronidazole are sample regimens that may be selected to maintain pathway adherence. The actual regimen prescribed should be based on current guidelines, local antibiotic resistance patterns, and the most affordable choices.

§ Splenectomy is also a recommended option for splenic marginal zone lymphoma

Note: Pathways are independent of specific health plan medical policy coverage criteria. Health plan medical policy/clinical guidelines should be consulted to determine whether proposed services will be covered. Biosimilars of reference products listed are considered “on pathway.” However, reimbursement for biosimilar products may be impacted by health plan specific formularies, medical policy and preferred product rules.
